

## Electro Llanera 37

### Electric Llanera Harp

---

**Size:** 152 cm

**Weight:** 7,8 kg

**Range:** 37 strings (nylon), E1 – D37

**Materials:** carbon fibre

**Finishes:** any paint colour

"True Fire" special finish (option)

### Electro 37 Llanera

Camac's adventures in South America began with the acoustic llanera, built on request for the famous harpist Edmar Castaneda. Then, during a visit to Venezuela, Leonard Jacome told us of his dream: an electric, solid-body llanera, directly descended from the DHC Blue Light. Leonard wanted a very light harp in carbon fibre, with a pickup on every string.

The Electric Llanera's extended range (37 strings, to low D), levers, and piezo-electric pickups have brought this llanera harp into the twenty-first century. It will be highly attractive to all harpists looking for powerful amplification possibilities, in the service of an innovative type of music.
